Tailgating of Another Kind Tailgate Options for Dumping

Dump bodies come equipped with a wide range of tailgate options to serve specific application needs. Here's a quick look at a few of the most popular and versatile options available:

Standard Swing Gate

The standard swing gate tailgate option allows for conventional dumping and spreading of material. It is well-suited for many commercial applications.

2-Way Tailgate

A 2-way (barn door) type tailgate manually operates like a standard tailgate and also swings around to the passenger side to eliminate height restrictions while dumping.

Hi-Lift

A hi-lift tailgate is a pneumatic powered tailgate that is often used for demolition and mining applications where large material, like boulders or rip-rap is being hauled. The hi-lift tailgate is also an excellent choice for metering applications when using spreader chains in a standard swing gate operation.

High 'N Slide (Exclusive to TBEI brands)

The High 'N Slide is a multifunctional hydraulic powered tailgate that 1) operates as a traditional tailgate, 2) gives you the high lift capability, and 3) has a sliding feature for metering loads (from within the truck's cab). This is a patent-pending exclusive design that differentiates you in the market.

Contact our expert sales staff to assist you in choosing the best tailgate option for your dump truck application (1-800-844-2519).
